EXPERIMENT 8

Tableau Dashboard: Chocolate Sales Analysis

1. Aim

To create a comprehensive, interactive Tableau Dashboard that displays chocolate sales metrics broken down by Product, Country, Salesperson, Date, and Order Status.

2. Algorithm & Workflow

- **Data Ingestion & Cleaning:** Load the raw dataset into Tableau (convert from XLS/XLSX to CSV format if required). Check data types for each field and clean missing or inconsistent entries.
- **Worksheet Creation:** Create individual worksheets to visualize key metrics:
- Scorecards / Cards: Total Sales ($271,618.25) and Total Boxes Sold (14,452)
- Line Chart: Sales Trend by Date
- Bar Charts: Top 5 Products by Sales & Top 5 Salespersons by Sales
- Map Visualization: Sales Distribution by Country
- Pie Chart: Order Status Breakdown (Delivered vs. Cancelled)
- **Dashboard Assembly:** Combine all created worksheets onto a single cohesive dashboard layout.
- **Interactive Filters:** Add global interactive filters for Country, Product, Salesperson, and Date, and apply them across all worksheets on the dashboard.
- **Export & Publishing:** Save and publish the final workbook file (.twbx) as 'Chocolate Sales Dashboard'.

3. Summary Metrics & Key Insights

4. Result

Result: The Tableau Dashboard was successfully created and deployed. It effectively visualizes total sales, top-performing products, top salespersons, sales distribution by country, sales trend over time, and order status fulfillment.
